LANGUAGES

English

Turkish

TECH STACKS

Languages:

C#, TypeScript, Python

Infrastructure:

Docker, Kubernetes, ArgoCD

Cloud:

AWS, GCP, Azure

Database:

MSSQL, MongoDB, PostgreSQL

Others:

Redis, Elasticsearch, Kafka,

RabbitMQ, Firebase

AWARDS

Product Hunt

1. Place of the Day

Patent

Yildiz Technical University

Tübitak Scholarship - 2209A

Yildiz Technical University

Gold Medal

ISIF 2020

Corporate Awards

RoofStacks - High Performer 2025

Doğuş Teknoloji - High Performer 2019

Doğuş Teknoloji - High Performer 2018

ABOUT ME

My deep-rooted interest in mathematics and computing has driven me to pursue a career in software engineering. Starting my journey at Yıldız Technical University's Mathematical Engineering department in 2013 marked the beginning of a lifelong passion becoming a profession. Over the past 8 years, I've gained hands-on experience across various industries, including vehicle finance, SaaS, IoT, and Tourism.

EDUCATION

Yildiz Technical University

Mathematical Engineering

2024 - Current

Master of Science

THESIS TOPIC: Multi Agent Systems

Mathematical Engineering

2013 - 2018

Bachelor - Honor Student

EXPERIENCES

SENIOR BACKEND ENGINEER / ROOFSTACKS

Sep 2023 - Present, Remote

SENIOR SOFTWARE ENGINEER / BERKUT TEKNOLOJİ

Feb 2023 - Aug 2023, Remote, Outsource

FOUNDING ENGINEER - DATAPAD (500 ISTANBUL-FUNDED)

Jan 2022 - Nov 2022, Remote

SENIOR SOFTWARE ENGINEER / DOĞUŞ TEKNOLOJİ

Apr 2021 - Jan 2022, Remote

SOFTWARE ENGINEER / DOĞUŞ TEKNOLOJİ

Oct 2019 - Apr 2021, Remote

JUNIOR SOFTWARE ENGINEER / DOĞUŞ TEKNOLOJİ

Remote, Jul 2017 - Oct 2019

SOFTWARE DEVELOPMENT INTERN / HALKBANK BT

Jun 2016 - Jul 2016

SIDE PROJECTS

You can check out my github address for my other public side projects.

PROJECTS

BİLETDÜKKANI - B2B & B2C AGENCY SMART TRAVEL SYSTEM

- Developed and maintained SEGGY Chatbot App, Intelligence Personal Travel Assistant Chatbot for TÜBİTAK 1507.
- Rebuilt and enhanced the authentication structure on the .NET 8 platform.
- Refactored the agency module from the monolithic legacy system into an independent microservice.
- Contributed to architectural design decisions, including BFF and API Gateway implementations.
- Took part in a cross-functional project utilizing NodeJS for backend services.
- Designed and integrated messaging systems using Kafka and Azure Service Bus in a distributed microservices.
- Deployed and maintained services on GCP and Azure using Kubernetes for container orchestration.

Tech Stack: C#, .NET 8, Entity Framework, NodeJS, IdentityServer, Kafka, CQRS, GCP, Azure, Kubernetes, Azure Service Bus, Firebase, Microservices, BFF, API Gateway, Gemini, ChatGPT, Langchain, Chromadb

DATAPAD - MOBILE FIRST DATA MANAGEMENT SYSTEM

- Developed a cross-platform mobile application using React Native
- Designed and implemented NodeJS-based microservices for the backend using a microservice architecture.
- Managed infrastructure provisioning with Pulumi and continuous deployment workflows using ArgoCD.
- Deployed services on AWS and GCP, utilizing Kubernetes and Docker for scalable containerized environments.
- Integrated MongoDB as a flexible, NoSQL database solution for managing dynamic user data.

Tech Stack: React Native, NodeJS, MongoDB, AWS, GCP, Firebase, ArgoCD, Pulumi, Kubernetes, Docker, Microservices

PETIMLE - PET HEALTH TRACKING & MANAGEMENT SYSTEM

- Developed a pet care platform as part of an internal entrepreneurship program, enabling users to track vaccinations, receive notifications, and conduct online veterinary consultations via a mobile app.
- Built the mobile application using React Native, ensuring a seamless user experience across devices.
- Designed and implemented backend services with NodeJS and Firebase, deployed on Google Cloud Platform.
- Successfully presented the project to the investment jury, resulting in funding approval for further development.

Tech Stack: React Native, NodeJS, Firebase, GCP

VOSVOS - ONLINE CREDIT APPLICATION SYSTEM

- Developed online vehicle credit services enabling seamless integration between VDF and N11 platforms.
- Built and maintained backend services using C# and Entity Framework, supporting MSSQL and PostgreSQL.
- Implemented asynchronous communication between services using RabbitMQ.
- Deployed scalable, containerized services with Docker and orchestrated them using Kubernetes on GCP.
- Adopted a microservices architecture to enhance system modularity and scalability.

Tech Stack: C#, Entity Framework, MSSQL, PostgreSQL, RabbitMQ, Docker, Kubernetes, GCP, Microservices

ZEBRA - VDF DEALER & CREDIT MANAGEMENT SYSTEM

- Led the modernization of a legacy monolithic Dealer Credit application by migrating it to a modern technology.
- Refactored and redeveloped core components using C# and Entity Framework.
- Ensuring database compatibility with both MSSQL and PostgreSQL.
- Implemented containerization using Docker, and managed deployments via Kubernetes and OpenShift on GCP.
- Integrated Redis for caching and optimized performance.
- Set up ELK Stack for centralized logging and monitoring to improve system observability and debugging.

Tech Stack: C#, Entity Framework, MSSQL, PostgreSQL, Redis, Docker, Kubernetes, OpenShift, GCP, ELK Stack

DOĞUŞ İNŞAAT - COST MANAGEMENT SYSTEM

- Modernized the Cost Management System, a 20-year-old legacy monolithic application, by overhauling its entire technological infrastructure.
- Rebuilt core functionalities using C# and Entity Framework, with support for both MSSQL and PostgreSQL.
- Containerized the application using Docker and managed deployments via Kubernetes and OpenShift on GCP.
- Integrated Redis for caching, improving system responsiveness.
- Deployed ELK Stack for comprehensive logging and real-time system monitoring.

Tech Stack: C#, Entity Framework, MSSQL, PostgreSQL, Redis, Docker, Kubernetes, OpenShift, GCP, ELK Stack

YILDIZ TECHNICAL UNIVERSITY - CONTACTLESS BODY TEMPERATURE MONITORING SYSTEM

- Developed a contactless body temperature monitoring system capable of continuous detection and mobile alerting in case of abnormal readings.
- Implemented the system using Raspberry Pi and thermal + ultrasonic sensors (AMG8833, HSCRO4) integrated with Python and Machine Learning for anomaly detection.
- Designed the mobile application and web interface using Java, Android, JSP, and XAMPP.
- Successfully patented the project and received TÜBİTAK 2209-A research funding and ISIF Gold Medal awards.
- Recognized for innovation and practical application in health-tech and early detection systems.

Tech Stack: Raspberry Pi, Python, Java, Android, JSP, XAMPP, AMG8833, HSCRO4, Machine Learning, MySQL
